WORLDWIDE

# INNOVATIVE PRINT PROCESSING „MADE IN GERMANY“

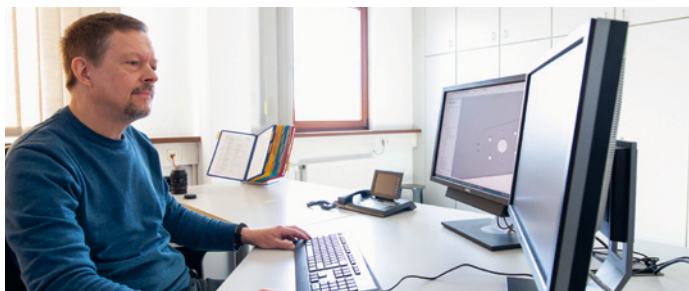

Welcome to Gerhard Busch EBB GmbH in Seevetal, your partner for innovative and durable print finishing machines. Our traditional family business was founded in 1949 by Gerhard Busch in Hamburg and is now run by Ekkehardt and Burkhardt Busch in the second generation.

„Made in Germany“ is more than just a promise to us. We offer a high level of in-house manufacturing depth. This means: All products are developed, manufactured, assembled, electrified, and installed or commissioned in our own factory in Northern Germany. Our own designers develop our devices both mechanically and electrically. When selecting suppliers, we also place the highest value on ensuring that components are manufactured in Germany. This uncompromising quality ensures the exceptional longevity and reliability of our machines, which are valued worldwide.

With **cutting-edge technology and the highest quality standards** in development, production, and service, we set standards. Numerous international patents and utility models demonstrate

our company's innovative strength. These technological milestones, such as the first pile turner (1976), the multiple bander, or our new automatic pile turner for packaging printing, underscore our leading position in the print finishing industry. Today and in the future!

## DID YOU KNOW?

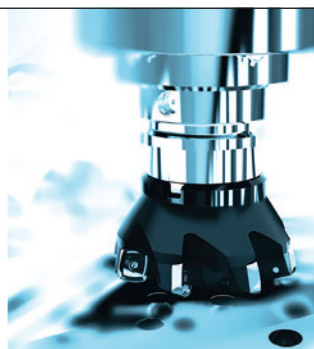

We export our high-quality machines to more than 180 countries. Through a network of selected representatives and dealers, we ensure that customers worldwide can rely on proven BUSCH quality.

Seit über 25 Jahren sind wir Ihr führender Partner für moderne Zerspanungswerkzeuge und Vertragshändler der Firma

## CUTTING-EDGE TECHNOLOGY, HOMEMADE

We offer our customers a wide range of innovative machines and products specifically tailored to the needs of print finishing and related industries. Each product is characterized by high quality, durability, and practical functionality.

Below is a brief overview of our product range:

### PILE TURNERS

An indispensable tool for high-quality printing companies as well as paper and cardboard processors.

### DIE-CUTTING MACHINES

For cutting the outer contours of labels, in-mold labels, brochures, credit cards, all types of loyalty cards, plastic badges, children's books, notepads (also angled), and similar products.

### BANDERS

Banding of small to large quantities – a comprehensive range from tabletop bundlers to multi-bundlers.

### BANDING MATERIALS

For our complete bundler technology, we offer first-class bundler materials, assembled in Germany and available from stock at affordable bulk prices.

### WASTE CONVEYORS

Custom-designed conveyor systems for transporting cutting and punching waste into containers – for almost all known print finishing machines. To optimize space efficiency, we offer customized upstream conveyor elements (auxiliary conveyor belts).

### PILE HOISTS

An indispensable peripheral device for cutting systems, allowing ergonomic work at a user-friendly height.

### JOGGERS

Our new product guarantees precise edge alignment of cutting layers.

### FERTIGUNG, VERPACKUNG UND AUTOMATION

#### PRODUKTE, DIE HOHE LEISTUNGEN UND DIE VOLLSTÄNDIGE FUNKTIONSTÜCHTIGKEIT DER ANLAGE GARANTIEREN

Förderung, Sortierung, Entnahme und Einlagerung von Waren müssen effizient und reibungslos ablaufen, um die vollständige Funktionstüchtigkeit der Anlage zu garantieren. Materialien fortzubewegen bedeutet allen verschiedenen Phasen im Prozess zu folgen. Daher ist es besonders wichtig Produkte anzubieten, die sich für diesen Zweck eignen. Von Komponenten für Bandanlagen über Rollen und Lösungen für die Lagerung kann Rulmecca die richtige Lösung für jede Anforderung anbieten. Die angebotenen Lösungen entstehen aus der langjährigen Erfahrung auf dem Gebiet und dienen der Verbesserung der Leistungen von Fortbewegungssystemen für Materialien.
